the pdf which shows product images on a grid in catalog page also have background shadow with them. would those images be provided ?

for locate store functionality. we would need a webservice to which we would be passing the current location (GPS coords).

DropShadow Questions

I would imagine that adding a shadow is not too hard? This will all have to be done dynamically in the end, so it needs to be a shadow treatment via Obj-C at some point.

If you do not have drop in solution available or it is going to slow things down, we can provide something for phase 1.

Store Locator Question

Store locator, blog, current promotion, video page – all webkit pages

Store locator: http://www.fossil.com/en_US/shop/fossil-store_locator.html

Blog: http://blog.fossil.com

Current promotion: http://registration.fossil.com/us/rescuedart2010/

Video Page: http://www.fossil.com/video

We will provide updated versions at a later date which removes all navigation and makes it more mobile optimized, also we will be using redirect urls to manage what is loaded... I can get these to you this week.
